
CFHD-SBHM

Solid State Disk Drives for Honeywell Single Board History Modules

*A Compact Flash upgrade for your
SBHM, with no moving parts*

Solid State Technology

This compact flash-based solid state drive emulates the laptop hard drives used with Honeywell's Single Board History Module. The use of industrial-grade compact flash offers high reliability with no moving parts.

Hard Drive Emulation

The CFHD-SBHM is configured to emulate a Hitachi TravelStar hard drive and equivalent drives used with the SBHM. It uses the same connector as the original hard drive.

Easy Installation.

With the same form factor as the original laptop drive and matching connectors, this replacement drive installs easily into the SBHM drive slot. For a redundant installation, the new drive will then synchronize with the existing drive, as would be done with the original hard drive. For a non-redundant installation, the new drive may be restored from a back-up of your current configuration. Please note that replacement CF cards must be formatted using Honeywell HVTS for the SBMS. CF cards purchased from WPC are shipped pre-formatted.

Low maintenance

The solid-state design and lack of moving parts results in disk replacement which requires little periodic maintenance. Because of the memory cycle limitations of CompactFlash, we recommend replacing and re-synchronizing the CF card every 5 years.

Specifications:

Capacity: 16 GB

CF Card: Type 1 SLC

MTBF: 1,000,000 hours

Operating temperature: -25-85 °C,

Physical size: 2.8"W x 0.4" H x 3.9"D

Op Voltage: 5V +/- 10%

Ordering info:

Please use designation CFHD-SBHM when ordering.
